How to Use this Guide

What is the purpose of this document?

The purpose of this guide is to describe the key steps that Clients will have to complete to onboard and set-up operationally as a Collateral Provider in BNY Mellon’s Segregated IM Triparty Service.

What is Regulatory IM?

Regulatory IM compliance is rolled out across multiple phases between September 2016 and September 2022. The scope of entities caught in-scope for each phase is driven by a respective set of AANA (average aggregated notional amount) thresholds. See the IM phase scope summary below.

For in-scope firms, the IM rules impose that any IM exchanged must be segregated in a manner that protects it from the default or insolvency of the collecting counterparty. Custodians have been chosen by the industry as the solution to the segregation of IM collateral.

As the IM rules demand gross two-way margin calls and collateral exchange (both Pledge and Receive requirements), each firm will appoint their own Custodian to segregate their pledged collateral. However, there is no requirement for both firms in a bilateral trading relationship to choose the same Custodian.

This means that in-scope firms will need to onboard and complete operational set-up at both their own Custodian and the Custodians appointed by their counterparties.

*On April 3rd 2020, in response to the global COVID-19 pandemic, BCBS-IOSCO recommended a deferral of the final implementation phases by a year. The deferral needs to be adopted into law by the local regulators to be effective.

**KEY POINT**

Further information on the changes firms must make under the IM rules can be found in BNY Mellon’s ‘Your Guide to the Non-Cleared Margin Rules,’ which you can find here

INTRODUCTION
BNY Mellon’s Seg IM Triparty Service

BNY Mellon provides a market-leading Seg IM Triparty Custodian service. This is a low-touch Triparty segregation service. It maximises efficiency and flexibility for your firm as Collateral Provider by outsourcing many of the day-to-day segregation responsibilities such as:

- Automated selection and allocation of assets
- Asset eligibility checks (e.g. credit rating checks, wrong-way risk, concentration limits)
- Asset optimisation rules
- Collateral asset pricing

Note that BNY Mellon also provides a Third Party Custodian service (known as Margin Direct), which should not be confused with BNY Mellon’s Triparty service. This is a simpler service that adopts a similar model to that used for Variation Margin. In Margin Direct the bilateral parties – the Collateral Provider and Collateral Receiver – are responsible for the selection of any collateral assets, plus any associated eligibility checks and pricing. Those assets are then physically delivered into BNY Mellon, who will be responsible for the segregation of those asset(s) on behalf of the Collateral Receiver.

This guide only covers BNY Mellon’s Seg IM Triparty Custodian service, not the Third Party (MarginDirect) service.
Example Process Flow

Note that the flow above only describes one half of the collateral exchange - your firm’s Pledge obligation. This is independent of your counterparties Pledge arrangements.
Daily Steps:

1. In advance of agreeing any margin calls you must ensure that you have sufficient assets within your Longbox to cover the agreed exposures across all counterparties.

2. A margin call is issued in the standard manner for uncleared OTC derivatives, i.e. for the difference between the Exposure and the previously settled Collateral Balance. The parties will review the margin call and agree the undisputed amount.

   Note that no collateral assets are agreed at this stage (which is the Triparty Custodian’s responsibility)… we’ll come back to this later.

3. Each party must instruct BNY Mellon the agreed total exposure that must be collateralised, known as the ‘required value’ or ‘RQV’.

   There are multiple methods to instruct RQVs to Triparty Agents and this guide covers the methods acceptable to BNY Mellon later in Section 10.

4. Upon receipt of matched RQV instructions BNY Mellon will allocate assets from the Collateral Provider’s Longbox account into the segregated account created on behalf of the Collateral Receiver, such that the post-haircut value of the allocated assets equals or exceeds the agreed RQV.

   The criteria that BNY Mellon follows to allocate assets are specified by the parties to the agreement in an Eligible Collateral Schedule (ECS).

   Terms include asset types, minimum credit ratings, concentration limits, wrong-way risk (WWR) provisions, haircuts and other asset-level criteria.

   BNY Mellon performs regular asset allocation runs so that the segregated collateral in each account is eligible and optimized.

   Since the assets are allocated through books and record movements (i.e. the assets do not actually need to settle in the market) this means that BNY Mellon is able to support extended Settlement Coverage.

5. BNY Mellon will publish details of the RQV instruction statuses in real-time and a breakdown of the allocated assets at prescribed frequencies throughout the business day.

   Details of the methods and frequency of reporting are covered from section 10 onwards within the AccessEdge Reporting and SWIFT Reporting sections of the guide.

✔ KEY POINT – The RQV can be defined as the total agreed exposure that must be collateralised at that point in time. The term RQV comes from the legacy Repo services offered by the Triparty Custodians, which has often acted as the foundation for their Seg IM services. Click [here](#) for more details of the RQV (and margin call) calculation.

✔ KEY POINT – No asset details are instructed by either party to the Triparty Custodia.

✔ KEY POINT – To verify that the allocated assets comply with the regulatory obligations, firms must confirm that they negotiate regulatory-compliant terms in their ECS.

✔ KEY POINT – Remember that if the overall RQV has reduced (i.e. a Pledge Return), then assets will actually be returned from the segregated account back to the Longbox account.
2.0 Global vs. Domestic BNY Mellon Platforms

Why does BNY Mellon have two separate account platforms?

BNY Mellon has two different account platforms, depending on the scope of securities used by its clients.

• The Domestic platform is deployed for clients who only use US-issued securities i.e. USD cash, US T-bills/T-notes/T-bonds/TIPS, US corporate bonds, etc. The Domestic platform is therefore limited to US operating hours.

• The Global platform is deployed for clients who want to extend beyond US-issued securities to global securities issued by any other supported country. It therefore supports extended operating hours vs. the Domestic platform. This also means that the Global platform is often used by clients who have cross-jurisdictional counterparties (i.e. not just confined to the US).

KEY POINT – Note that clients can use the Global platform for US-issued securities, but non-US securities cannot be used on the Domestic platform.
Will my Pledge accounts all be on the same platform?
Yes, all of your pledge accounts will be on a single platform – this is specific to the BNY Mellon entity with whom your firm has executed the contract.

What platform must the Collateral Receivers set-up through?
Your clients will likely be receiving segregated IM from multiple Pledgors through BNY Mellon Segregated Triparty service. There is no guarantee that all accounts will be on the same platform and so Collateral Receivers must liaise with their BNY Mellon point of contact to identify all in-scope platforms from their account population.

Similarly, where your firm is also a Collateral Receiver through BNY Mellon you must confirm which platform your counterpart will be pledging through, and ensure that your firm is set-up operationally in all platforms as required.

Are there any differences between the Domestic and Global platforms?
There are some minor differences between the set-up required on both platforms (e.g. Portal logins), which we’ll describe in more detail later on within this guide.

Anything else I should know about BNY Mellon’s platforms?
There are sub-platforms under both of the Domestic and Global platforms, named RE1 through to RE4. The sub-platforms actually hold the underlying accounts. See the table to the right for more details of the four sub-platforms.

<table>
<thead>
<tr>
<th>Platform</th>
<th>Security Scope</th>
<th>Sub-Platform</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domestic</td>
<td>US Securities</td>
<td>RE1</td>
</tr>
<tr>
<td></td>
<td></td>
<td>RE2</td>
</tr>
<tr>
<td>Global</td>
<td>Global Securities</td>
<td>RE3</td>
</tr>
<tr>
<td></td>
<td>Asian Securities</td>
<td>RE4</td>
</tr>
</tbody>
</table>

⚠️ KEY POINT – Please liaise with your BNY Mellon point of contact to confirm which sub-platform(s) your Collateral Provider counterparts are using and therefore you as Collateral Receiver will need to set-up on.
There are multiple stages involved in the onboarding and operational set-up as a Collateral Provider in to BNY Mellon’s Triparty Seg IM service.

The visual to the right describes the key steps that Collateral Provider firms will need to move through until they are fully set-up and in a position to exchange collateral.

**KEY POINT** - The high-level steps for Seg IM Collateral Provider set-up are sequential, with the previous stage having to be completed before the next step commences.

This guide has been structured in the same way as the flow to the right, with separate sub-sections for each of the different stages that Collateral Provider firms will need to complete.
Collateral Provider Mandate

The journey begins when you appoint BNY Mellon as your Triparty Agent.

The first step will be to work with your BNY Mellon Sales representative and Relationship Manager to complete and return a number of contracts

- Custody Agreement
- Security Interest
- Rule User Agreement
- Fee Schedule
What is KYC?

Know-Your-Customer, more commonly known as KYC, is the due diligence process all Custodians use to make sure that each new legal entity passes any regulatory and internal checks to onboard as a client.

For BNY Mellon this involves your firm submitting key documents, as requested by BNY Mellon.

✔ KEY POINT – KYC is completed at legal entity-level. This means that if the in-scope entity for Seg IM has not previously onboarded at BNY Mellon, then the full set of KYC requirements will need to be performed.

✔ KEY POINT – Even if the Collateral Provider’s legal entity has previously onboarded at BNY Mellon, albeit for a different product or a different service, there may still be additional KYC requirements specific to the Seg IM service.
What documentation is necessary to complete KYC?

All firms will need to provide a common set of documents or information, including:

- Company Name
- Company Address
- Tax Identification Number
- Nature of the Business
- Company Formation Document (e.g. Articles of Association)
- Country and Year of Formation

Firms will need to provide additional documentation, depending upon:
1. Factors specific to your individual firm
2. The BNY Mellon entity that your Collateral Provider has elected to pledge IM through

✔ KEY POINT – Collateral Providers must liaise with their assigned BNY Mellon point of contact to confirm the full suite of documentation required to complete KYC for Triparty Seg IM.

When do I need to complete KYC?

KYC should be completed as soon as possible.

Receiving KYC approval is a prerequisite for firms to move onto legal contract execution (i.e. ACA, ECS) and the subsequent operational set-up tasks, so should not be delayed.

Your BNY Mellon point of contact will create a case for your firm and help determine the specific requirements applicable to you.

How do I know when KYC is complete?

Your BNY Mellon point of contact will inform you when you have completed the KYC process and therefore can move onto legal contract execution.
What is the Dealer Longbox?

The longbox is linked to one or more underlying custody accounts and is specified in the account opening documentation as the Collateral Provider’s source of assets that will be allocated to meet their collateral obligations.

Can we use an existing Dealer Longbox?

If your firm has an existing relationship with BNY Mellon for other Triparty products, it may be possible to use an existing Longbox to meet your requirements for Segregated Initial Margin (subject to requirements that you must discuss with your BNY Mellon point of contact).

In this configuration all products would be employing the same source of collateral assets and so internal coordination will be important to ensure sufficient assets are always present to meet all of your obligations across products.
6.0 Dealer Longbox

How do we set-up a new Dealer Longbox?

If your firm is new to BNY Mellon or your preference is to establish a new Longbox specific to Segregated IM activity, your BNY Mellon point of contact will request the following from you;

- Details of all in-scope markets for the assets you intend to pledge as collateral
- A completed tax questionnaire (see related documents)
- Tax contacts for your firm
- Corporate Action contacts for your firm
- Cash SSIs – for any income proceeds

- Instruction SSIs – in the event that BNY Mellon is required to instruct securities on your behalf
- Your firm’s Euroclear account details
- Intended method of instructing assets to the longbox – SWIFT and / or Nexen Portal
  - If SWIFT you must provide the BIC code that instructions will be sent from
  - If via the portal, a list of users who will require access must be provided

Depending upon the markets that are identified as in scope, additional tax forms specific to certain jurisdictions may also be required. Your BNY Mellon point of contact will advise if this requirement is applicable upon review of your submissions.

How will we know when the Dealer Longbox is ready?

Depending on the markets that you have specified in scope, more than one custody account (also referred to as a GSP account) may be required per Longbox. BNY Mellon will open on your behalf;

- A single custody account for all assets, excluding APAC
- A single custody account for APAC, excluding Japan
- An auxiliary custody account for Japan

Once the accounts have been opened and linked to the Dealer Longbox your BNY Mellon point of contact will notify you of the Dealer Longbox account number also known as the Dealer ID or DID.

BNY Mellon will also notify you of the custody account number(s) and provide SSIs for all applicable markets.

✔ KEY POINT – You will require the DID to perform the collateral RQV instructions versus your Collateral Receiver(s)

✔ KEY POINT – You will require the custody account numbers and SSIs to settle assets into the Dealer Longbox for use as segregated Initial Margin.
Populating the Dealer Longbox

How do I deliver assets to my Dealer Longbox to meet my IM collateral obligations?
Assets are delivered into the Longbox by instructing a Free of Payment Receipt to BNY Mellon using the SSIs provided during the account opening stage.

How do I recall assets from my Dealer Longbox?
To recall assets from the Longbox a Free of Payment Delivery must be instructed to BNY Mellon. BNY Mellon can only release the assets, if there are sufficient alternative eligible assets available in the Longbox to cover any collateral obligations.

How do I communicate the Receipt / Delivery instructions to BNY Mellon?

There are 2 methods available to instruct BNY Mellon,
• Through the SWIFT network
• ICO – an application within BNY Mellon’s Nexen online portal platform

Upon successful receipt of instruction BNY Mellon will release the Receipt / Delivery instruction to the market which must match with a corresponding instruction from your firm’s sub-custodian.

✔ KEY POINT – Even if your sub-custodian is BNY Mellon the transaction will settle through the market and requires your firm to instruct both sides of the transaction.

There are two types of SWIFT message depending on the intention of the instruction:
• MT540 – Receive Free – to be instructed when delivering assets into the Longbox
• MT542 – Deliver Free – to be instructed when recalling assets from the Longbox

Both message types must abide by the industry standard template specific to the market of the asset being delivered. The Longbox SSIs that must be included within the instructions, including the BIC that the message must be instructed to, will be provided for each in-scope market when the Longbox account is opened.

For further details on how to construct SWIFT MT540/542 messages please refer to the SWIFT ISO Standards website
https://www.iso20022.org/15022/uhb/finmt540.htm
https://www.iso20022.org/15022/uhb/finmt542.htm

Instructions may also be entered via the ICO application within Nexen.
When a user successfully enters an instruction in ICO, the corresponding SWIFT instruction will be generated and released to the market to match with your sub-custodian.

For further details on how to instruct in / out of the longbox through ICO please refer to the Nexen Instructions User Guide in the related documents section (Deliver Free p79 & Receive Free p85).

✔ KEY POINT – Until the assets have settled in the market they will be unavailable to collateralise any agreed exposure. It is important to monitor your longbox balance to ensure sufficient assets remain available to cover all collateral obligations.

✔ KEY POINT – We recommend that all firms planning to employ ICO speak to their BNY Mellon point of contact and arrange a demonstration of how to use the portal.
6.3 Asset Usage

Which assets will BNY Mellon use to cover the collateral exposure?

Assets are allocated per the terms of the underlying Eligible Collateral Schedules using the ‘Better Margin’ methodology. Under this logic BNY Mellon will allocate eligible assets with the lowest margin adjustment (smallest haircut) applicable as a priority.

Should you wish to implement any bespoke allocation criteria based on parameters beyond margin levels, please liaise with your BNY Mellon point of contact.

How frequently are assets allocated?

BNY Mellon perform automated allocation runs on an hourly basis by default to ensure all agreed RQVs are collateralised and assets are distributed in the most efficient manner.

What happens in the event of a corporate action?

On the Record date BNY Mellon will remove assets from segregated accounts and place into a ‘record date lock-up account’ that prevents them from being included in any allocations. The positions are released from the record date lockup account on the next business day.

The proceeds are received into the Pledgor’s cash account before being distributed to the SSIs on record.
7.0 Account Opening Documentation

7.1 Overview

There are multiple Legal contracts that in-scope firms will need to execute with their counterparties for each IM relationship.

BNY Mellon’s Domestic platform (US securities only) and Global platform (global securities) have slightly different sets of contracts that need to be executed. This is based on both platforms having different jurisdictional requirements.

There are two key contract types that Providers at BNY Mellon will need to execute:

1. **Bilateral contracts** - Must be executed directly between the two bilateral parties, without BNY Mellon involvement (i.e. Provider and Receiver)
   
e.g. ISDA CSA/CSD/CTA, ISDA Security Agreement

2. **Three-way contracts** - Must be executed between the Provider, Receiver and BNY Mellon
   
e.g. BNY Mellon Account Control Agreement (ACA), Eligible Collateral Schedule (ECS).

See the table on the next page for a summary of the key IM contract types.
### Key IM Contract Types

</tr>
</tbody>
</table>

**KEY POINT** - The BNY Mellon Global Service supports multiple ISDA IM bilateral contract types (CSA/CSD/CTA). The supported contract type will be dependent on which BNY Mellon entity the segregated account is opened through.

The BNY Mellon Domestic Service supports the ISDA IM bilateral CSA only.
The diagram to the left illustrates an example of the full set of documents that firms would need to execute (and the parties to each document).

**Key BNY Mellon Contracts**

The key IM contract templates provided by BNY Mellon are the Account Control Agreement (ACA) and the Eligible Collateral Schedule (ECS).

Both are three-way contracts that need to be executed by the Custodian, the Collateral Provider and the Collateral Receiver.

**What is an Account Control Agreement (ACA)?**

At a high-level, the ACA defines the terms and conditions under which BNY Mellon will operate the segregated account on behalf of the parties.

The diagram to the left illustrates an example of the full set of documents that firms would need to execute (and the parties to each document).
Eligible Collateral Schedules

What is the Eligible Collateral Schedule (ECS)?

The ECS specifies the assets eligible to be pledged as collateral into the Collateral Receiver’s segregated account, including any restrictions (e.g. eligible asset types, eligible issuers, minimum credit ratings, wrong-way risk, concentration limits, etc) and the corresponding margins (haircuts).

KEY POINT - The ACA is distributed to clients and counterparties on a strictly ‘non-negotiable’ basis

How do I specify the assets that I will pledge as collateral?

The Eligible Collateral Schedule (ECS) specifies the assets that both parties agree are eligible to be pledged by the Collateral Provider to cover any agreed exposure. The ECS will specify the following:

- Eligible Assets – Asset type, issuer type, country of issue
- Haircuts / Margin Percentages – Based on asset type, ratings, residual maturity, any cross-currency adjustments (FX haircuts)
- Other Restrictions – Concentration limits, Wrong-Way risk (WWR) provisions

Who starts the ECS negotiation process?

As Collateral Provider it will be your firm’s responsibility to propose the eligible terms to the Collateral Receiver. This is achieved by creating a Ruleset in BNY Mellon’s electronic Eligible Collateral Schedule Manager, RULE.
Can you tell me some more information about RULE?

RULE is a web-based portal that enables parties to electronically negotiate and create eligible collateral schedules, directly within BNY Mellon’s systems, therefore reducing negotiation timescales.

If both parties are RULE users, then benefits include:

• Quicker negotiations (RULE avoids the need for the long email trails often seen for document-based negotiations)
• Lower resource burden across legal negotiation teams (through employment of bulk negotiation and processing functionality)
• Quicker operational usage of ECS terms once executed (no manual data input)

The RULE system allows the user to electronically perform the tasks below on their schedules:

• Create
• Edit
• Delete
• Approve
• Search
• View existing terms
• View and manage pending documents

Does the Collateral Receiver need to be on RULE as well?

If both parties are RULE users the process to negotiate and activate terms will be accelerated.

However BNY Mellon has deliberately given flexibility to the Collateral Receiver negotiation methodology. If your counterpart is not a RULE user you may generate a locked PDF of the terms you have created in RULE and share with the client. Any negotiated revisions must be amended in RULE until all parties are satisfied at which point a final PDF template should be sent for the Collateral Receiver to execute.

As Collateral Provider you must authorise in RULE as normal while the Receiver returns the executed paper version to BNY Mellon. Upon successful validation of signatures BNY Mellon will then activate the Ruleset against the segregated account.

Electronic Negotiations via RULE

How do I access the RULE system?

In order to access RULE, please follow the steps below:

1. Go to https://my360.bnymellon.com
2. Enter your User ID and Password
3. Click Login
4. The first time you login to RULE you are asked to change your password for security purposes.

How do I Create, Edit or Approve an Eligible Collateral Schedule in RULE?

BNY Mellon have published a comprehensive standalone user guide for the RULE system.

Bearer of this rule is hereby purchased with no further action from the user, in accordance with the applicable collateral documentation and the applicable tax documentation, which can be obtained from your BNY Mellon point of contact if required.

KEY POINT – Certain asset types will require both parties, Collateral Receiver and Provider, to provide applicable tax documentation before they can be used if deemed eligible collateral. RULE will identify any in-scope assets and prompt the user to complete the applicable tax documentation, which can be obtained from your BNY Mellon point of contact if required.

PLEASE REACH OUT TO YOUR BNY MELLON POINT OF CONTACT FOR A COPY OF THE RULE USER GUIDE AND TO BE PROVIDED WITH YOUR RULE USER IDS AND TEMPORARY PASSWORDS
8.0 Operational Set-up

Overview

There are three key operational processes requiring set-up for Seg IM Collateral Receivers at BNY Mellon.

- Account Set-Up
- RQV Instructions
- Allocation Reporting

See the visual on the next page for the operational set-up processes and the key steps under each. These are then covered in more detail within the subsequent sections.

KEY POINTS

✔ KEY POINT – The different Operational set-up processes are completed in parallel, due to the number of steps involved.

✔ KEY POINT – If your firm outsources some or all of your operational processes to an Agent, then we would expect the Agent to own the operational set-up described.
### Operational Set-Up

Account creation post-ECS execution

- Account creation
- Receive Account IDs

### RQV Instructions

Options for RQV instructions and their match status

- Non-SWIFT User
- SWIFT User

- AccessEdge Portal Set-Up
- SWIFT Instruction Set-Up

### Allocation Reporting

Reporting options for view of collateral allocations

- Non-SWIFT User
- SWIFT User

- Access Edge Portal Set-Up
- SFTP
- SWIFT Reporting Set-Up

MT527
MT568

#### SWIFT Reporting

### Ready for Collateral Exchange

Segregated accounts opened, both parties capable of exchanging collateral and interacting with BNY Mellon.
See the corresponding sub-sections and hyperlinks below for navigation.

1. Account Set-Up
2. Background to RQV Instructions & Allocation Reporting
3. SWIFT vs Portal Comparison
4. RQV Instructions & Allocation Reporting via Portal
5. RQV Instructions & Allocation Reporting via SWIFT
Account Set-Up

What is account set-up?
Account set-up is the process within BNY Mellon to create and activate the Segregated IM account, following the execution of the necessary legal contracts i.e. the ACA and ECS.

Once created, the eligible collateral terms must be configured on the account. BNY Mellon will activate the terms of the agreed ECS (Ruleset) once they have been approved by all parties in RULE.

How do I know that account set-up is complete?
BNY Mellon will send an implementation notification, via email, that account set-up is complete.

This email will contain all relevant IDs required for the daily operational exchange of collateral into the segregated account, including:

- Purchaser ID ('PID') - This is the Collateral Receiver’s ID
- Dealer ID ('DID') - This is the Collateral Provider’s ID
- Account number - This is the account number for the new segregated account
- Ruleset ID - This is the ID for the eligible collateral terms assigned to the account (which have been agreed via the ECS)

✔ KEY POINT – The IDs provided are key for the daily operational management of the segregated account. Your firm will need these IDs for use of the BNY Mellon Portals, reporting and SWIFT messaging.
This section gives an overview of the RQV instructions and reporting used within BNY Mellon’s Triparty Seg IM service. The aim here is to help your firm to understand the relevant processes before getting operationally set-up.

We start with a reminder of the Triparty Custodian IM flow.
Instructions

Why do we need to send RQV instructions to a Triparty Custodian?
All Triparty Custodian services for Initial Margin require both bilateral parties to instruct their collateral requirements to the Custodian, containing what is called an overall required value (RQV). The process is referred to as Matching Instructions.

But what is an RQV?
The RQV can be defined as the total agreed exposure that must be collateralised at that point in time. The term RQV comes from the legacy Repo services offered by the Triparty Custodians, which has often acted as the foundation for their Seg IM services.

Ok, but what is the margin call amount that we agree with our counterparties?
For Variation Margin (VM), bilateral parties agree the ‘delta amount’ within their margin calls i.e. the difference between today’s exposure and current collateral balance.
For Initial Margin, the majority of in-scope firms have continued to adopt the same approach, in an attempt to maintain similar processes for VM and IM.
This means IM firms generally agree the delta amount for their IM margin calls, by comparing today’s exposure to the previous business day’s RQV.
A simple IM margin call example would be:

Are there other differences in the margin call process for Initial Margin held at a Triparty Custodian, compared to Variation Margin?
Yes, there are a couple of other key differences.
Unlike VM, for IM segregated at a Triparty Custodian no underlying assets are specified when agreeing the margin call (or instructing an RQV). Instead only a notional amount in base currency is agreed with your counterparty.
Also, we must remember that IM is a two-way requirement. So your firm will need to agree margin calls and instruct collateral, if required, for both the Pay and Receive legs.

So what should we instruct to the Triparty Custodian for Initial Margin?
It’s important that the RQV, rather than the delta amount, is instructed to the Triparty Custodian. The Custodian only wants to know the overall collateral requirement, so they know the amount of assets to be allocated.
This means that if both firms choose to agree the delta amount for their IM margin calls, they will need to convert the delta amount into the RQV before sending their instructions to the Triparty Custodian.
In simple terms the typical daily RQV calculation is:

\[
\text{Today's RQV} = \text{Today's exposure} - \text{Previous business day's RQV} \\
\text{Today's RQV} = \text{Margin call amount} + \text{Previous business day's total collateral balance} \\
\text{Today's RQV} = \text{Today's margin call agreed amount} + \text{Previous business day's total collateral balance} \\
\]
See the example RQV scenarios below, showing amounts for both the bilateral IM margin calls and the Custodian RQV instructions.

<table>
<thead>
<tr>
<th>Day</th>
<th>IM Exposure</th>
<th>Previous RQV (collateral balance)</th>
<th>Margin Call (Delta Amount=IM Exposure – Previous RQV)</th>
<th>Agreed Amount (with counterparty)</th>
<th>RQV instruction (Previous RQV + Agreed amount)</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$2,000,000</td>

<td>$1,000,000</td>
<td>$1,000,000</td>
<td>RQV increase - RQV equals previous RQV plus today's margin call agreed amount</td>
</tr>
</tbody>
</table>

Does my Provider also need to instruct the RQV to BNY Mellon’s Triparty Seg IM service?

BNY Mellon’s Triparty service operates on matched instructions, which means that both the Collateral Provider and Collateral Receiver must instruct the same information before BNY Mellon can allocate eligible assets to cover the exposure.
When do we need to instruct our RQV so that we match with our counterparty and have updated asset allocations by close of business?

There are different RQV instruction cut-off timings for each of BNY Mellon’s sub-platforms, both for Portal instructions and SWIFT. These are shown below.

<table>
<thead>
<tr>
<th>BNYM Sub-Platform</th>
<th>RE1 &amp; 2</th>
<th>RE3</th>

<td>04:00(T+1)</td>
<td>08:30</td>
</tr>
</tbody>
</table>

* Correct as of July-2019. Please check latest timings with your BNY Mellon point of contact.
** Please add one hour to Singapore (SGT) and Japanese (JST) timings between November and March each year for US daylight savings change.

✔ KEY POINT – Instruction cut-off timings will depend on the sub-platform (RE1 to RE4) which you are pledging Initial Margin through.

Will my RQV instruction still match if I send it after the cut-off timing?

No. This is because the matching window will have passed.

The RQV instruction will still be live when the system re-opens the next business day; however the settlement date on the instruction will no longer match with the actual date. This means that the instruction will need to be cancelled and re-booked for the new settlement date.

Do we need to instruct our RQV if there is no margin call agreed amount?

No. If no margin call is due or any call has been fully disputed with your counterparty, then no RQV needs to be instructed to BNY Mellon.

BNY Mellon will continue to use the previous matched RQV for its asset allocations until an amended RQV is received from both parties.

✔ KEY POINT – BNY Mellon cannot accept a new RQV instruction if a previous instruction remains unmatched (as there is no option to modify an unmatched instruction). Therefore you will need to cancel the original instruction before submitting the revised RQV instruction.
9.2 RQV Instruction Status

What should we do after we’ve sent an RQV instruction?

Once RQV instructions have been issued by one or both parties, then firms may want to find out the match status with the counterparty’s equivalent instruction.

What types of message instruction status does BNY Mellon provide?

BNY Mellon supports the same set of RQV instruction statuses, regardless of which reporting medium is used (SWIFT or AccessEdge portal).

There are two different types of instruction status:

1. RQV Match Status - BNY Mellon calls this the 'Deal Match status', which is assigned via the Automated Deal Matching (ADM) service. This reflects the match status of the original RQV instruction with the counterparty’s corresponding instruction.

2. Allocation Status - BNY Mellon calls this the 'Trade Status'. This reflects the asset allocation status once RQV instructions from both parties have been matched.

See the table to the right for details of the underlying RQV Match and Allocation status values.

✔ KEY POINT - Only after the RQV Match Status shows as 'Matched' will the parties be able to see the corresponding Allocation Status. This is because no asset allocations will be triggered until both sides have matching instructions.
Can we subscribe to both the RQV Match & Allocation statuses?

For SWIFT, your firm will have the choice to subscribe to either, or both, statuses via the MT558 SWIFT message.

In AccessEdge, users can see both the RQV status and whether they are fully allocated for each account (which is the equivalent of the Trade Status).

See the relevant sections on SWIFT and AccessEdge for more details on status tracking.

What action do we need to take if our RQV instruction is not matched?

If an RQV instruction is not matched, the first step is to ensure that you have instructed BNY Mellon correctly - the format and agreed terms. If not, you will need to amend your instruction as appropriate.

If you have instructed successfully the next step is to liaise with your counterparty directly to ensure they have or will submit the necessary corresponding instruction.

Can we also receive a status when our counterparty has instructed but we haven’t?

Yes. In addition to instruction statuses, firms may also track Allegements. Allegements are available both via the Access Edge portal and SWIFT instructions (MT558 message).

✔ KEY POINT - It is your firm’s responsibility to check your own Deal status and ensure that instructions are matched with your counterparties.

After instructions have been matched BNY Mellon own any subsequent action to allocate assets to cover the full RQV.

Remember that an account will only be fully allocated if you have provided sufficient eligible collateral assets to your BNY Mellon longbox to cover all agreed RQV exposures.
9.3 Allocations

What is the allocation process?
The allocation process is the function by which collateral assets are allocated from the Collateral Provider’s Longbox inventory account to the Collateral Receiver’s segregated account, subject to the eligibility criteria defined in the ECS and any optimisation rules set up by the Collateral Provider.

When does the allocation process take place?
Once matching instructions are received from both Collateral Provider and Collateral Receiver the allocation process starts i.e. Deal Status = Matched.

Post-matching, the next allocation run launched will attempt to collateralize the RQV subject to sufficient, eligible collateral being held by the Collateral Provider. Regular allocation runs will take place during the day.

Each time a matched instruction is received the RQV and allocated assets will be updated in line, via the next allocation run.

Why is my RQV not fully collateralised when instructions have matched?
There could be multiple reasons why the RQV is not fully collateralised, including:

- You have not provided sufficient eligible collateral in your longbox
- Allocation run is yet to start or is in progress

What happens if no RQV is submitted (i.e. when no margin call is agreed)?
If no RQV is submitted on a given business day then BNY Mellon will continue to allocate assets to cover the previously matched RQV. Assets will be allocated/ returned as necessary as a result of any collateral value changes.

What happens if we submit multiple RQVs on the same day?
Although a less likely scenario for Seg IM, if multiple RQVs are submitted throughout a day then they will be treated in the chronological order that they match. The end-of-day allocation will then be equivalent to the last of the matched RQV instructions.
BNY Mellon offers more than one way to send settlement instructions and receive any related reporting.

So what are the different ways I can send settlement instructions and receive asset allocations reporting at BNY Mellon?

See the diagram to the right, which summarises the different methods Collateral Receivers can use at BNY Mellon.

In summary, Collateral Receivers can choose either of the methods to gain all information they need:

1. SWIFT - The industry standard for electronic settlement messaging, or
2. BNY Mellon’s Portals – Website interfaces that users can logon to process RQV instructions and download reports from
Firms should ask themselves key questions when choosing between SWIFT and BNY Mellon Portal options, such as whether they, or their Agent/Vendor solution(s):

a) support SWIFT messaging?

b) support the key SWIFT message types used for Triparty Custodian-held collateral? (i.e. MT527, MT558, MT569)

If you answer no to either of these questions, it may make more sense for your firm to instead deploy the BNY Mellon portal. The Portals are also well-suited for Clients who have a low volume of collateral instructions and therefore don’t require the overhead of the full SWIFT messaging suite.

Can you tell me more about the different message instruction options available from BNY Mellon?

To instruct the Seg IM RQV to BNY Mellon and receive the message instruction status back (if required), firms have two main options.

<table>
<thead>
<tr>
<th>Instruction Option</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access Edge Portal</td>
<td>Log in and instruct directly through the BNY Mellon AccessEdge portal. RQV instruction match status can also be monitored here.</td>
</tr>
<tr>
<td>SWIFT</td>
<td>Secure market-standard electronic messaging via SWIFT format, for outbound RQV instructions (MT527) and inbound status (MT558) consumption into Client’s systems.</td>
</tr>
</tbody>
</table>

And what are the different reporting options available from BNY Mellon?

BNY Mellon provides multiple reporting methods to its Collateral Providers. These are summarised within the table below.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Access Edge Portal</td>
<td>Standard real-time reporting available direct from the AccessEdge Portal.</td>
<td>Via Portal download</td>
<td>UI and CSV download</td>
<td>Real-time (current snapshot only)</td>
<td>Client-driven, based on portal download</td>
</tr>
<tr>
<td>V4 Allocation Extract Report</td>
<td>The Allocation Extract provides comprehensive data for Collateral Providers with respect to the holding and allocation of collateral.</td>
<td>SFTP</td>
<td>DAT and CSV</td>
<td>As per scheduling</td>
<td>Configurable Scheduling</td>
</tr>
<tr>
<td>SWIFT</td>
<td>Secure market-standard electronic messaging via SWIFT format, for consumption into Client’s systems.</td>
<td>Via SWIFT network</td>
<td>MT569</td>
<td>As per scheduling</td>
<td>Configurable scheduling</td>
</tr>
</tbody>
</table>
How do I gain more information about the different instruction and allocation reporting methods that BNY Mellon offer?

This document goes into further detail on the instruction / reporting methodology that BNY Mellon offer:

- For the use of AccessEdge - click here
- For the Allocation Extract report - click here
- For the use of SWIFT - click here

Do I need to submit my instruction and reporting preferences to BNY Mellon?

Yes, this is key.

BNY Mellon will need to perform different Seg IM set-up based on your instruction and reporting preferred methods. Without submitting your preferences BNY Mellon won’t be able to commence the set-up for your firm.

How can I submit my instruction and reporting preferences to BNY Mellon?

Via the forms below, which should be submitted to your BNY Mellon point of contact.

Your firm must submit your preferences through three Excel based forms that will have been included in the accompanying documents.

<table>
<thead>
<tr>
<th>Form</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>GTBS Client Access Form</td>
<td>Specifies user details for access to portal(s)</td>
</tr>
<tr>
<td>GTBS Reporting Request Form</td>
<td>Specifies the requested Allocation report types and timing</td>
</tr>
<tr>
<td>GTBS Messaging Request Form</td>
<td>Specifies preferences when instructing RQVs via SWIFT</td>
</tr>
</tbody>
</table>

If you do not have copies of these forms, please reach out to your BNY Mellon point of contact as necessary.

But, before submitting the forms, please make sure that you understand the methods you intend to adopt by reviewing the detailed sections of this guide.
What is AccessEdge?
AccessEdge is the BNY Mellon web-based portal application that can be used by Clients for operational tasks related to RQV instructions and allocations reporting.

What can I do within AccessEdge?
There are a number of different functions supported via the AccessEdge portal, including the following:
• View your Seg IM accounts
• Instruct RQV
• Track RQV instruction status
• Update RQV instruction
• View collateral allocations reporting
• View assets available in your longbox

How do I log onto AccessEdge?
Use the following URL to enter AccessEdge – https://next.accessedge.com/
Enter your username and password to log into the portal. The first time you log in you will need to change the temporary password assigned to you.

How should I use AccessEdge on a day-to-day basis?
The scenarios relevant to Segregated IM are described in the AccessEdge Quick Reference Guide.
• View Accounts & Statuses
• View Eligible Collateral
• Instruct RQV
• Monitor statuses
• Review Collateral Allocations
If you do not have a copy of the Quick Reference Guide please contact your BNY Mellon point of contact.
11.2 Access

How up-to-date is the information showing in AccessEdge?

AccessEdge reflects a real-time snapshot of all information related to accounts, instructions and collateral allocations.

Who needs access to AccessEdge?

If you are directly involved with the Custodian operational processes, either hands-on or supervisory, then we’d suggest gaining access to AccessEdge. Even if your firm intends to instruct RQVs using SWIFT, then the AccessEdge portal can be used as a fallback option, so it is recommended that access is raised.

Ok, so how do I gain access to AccessEdge?

For access to the Global platform (RE3 and RE4), the first step is to complete the Electronic Access form. This gives your firm authority to use electronic instructions via AccessEdge.

The Electronic Access form will have been included in the accompanying documents. If you do not have a copy, please reach out to your BNY Mellon point of contact for a copy.

Note that for the Electronic Access form is not required for the Domestic platform (RE1 and RE2).

The next step is to raise which Users should be given access to AccessEdge for both the Domestic and Global platforms (RE1 to RE4).

This is achieved by completing the AccessEdge tab of the GTBS Client Access Request form which will also have been included in the accompanying documents. Again, if you do not have a copy, please reach out to your BNY Mellon point of contact for a copy.

Once you fill in the relevant fields, it should be returned to your BNY Mellon point of contact.

How do I raise access for different user profiles (e.g. an inputter vs a reviewer vs read-only)?

There are two different levels of access that can be raised per user, shown within the ‘Access Type’ column of the Client Access Request form:

• Standard - Only required if the user will be instructing RQVs or updating RQV instructions.

• Read-only - Access limited to the read-only functions of AccessEdge, including RQV status tracking and viewing collateral allocations. No ability to create or update RQV instructions.

What are AccessEdge’s systemic requirements?

AccessEdge can be supported via the latest versions of Internet Browser and Chrome.
How will I know when my access to AccessEdge has been granted?

You will receive an email from the BNY Mellon Helpdesk with your AccessEdge login and temporary password, which you must change when you first login.

Does AccessEdge show all segregated accounts held on both Domestic and Global platforms?

Yes, AccessEdge will give you a view of all segregated accounts held across all platforms (Domestic/Global) and sub-platforms (RE1-4).

However, you will be provided with a separate login and password for each BNY Mellon sub-platform that you require access to (note that RE1 and RE2 share the same login details).

This means that if you pledge through one platform, but face a counterparty who is pledging to your firm through a different platform, you will be sent multiple logins.

For example your firm is pledging through the BNY Mellon Global platform (RE3), but your counterparty, Bank ABC, has appointed BNY Mellon Domestic service (RE1/2), your employee(s) will have a separate username and password for each environment. See the table below.

<table>
<thead>
<tr>
<th>Provider</th>
<th>Receiver</th>
<th>BNY Platform</th>
<th>BNY Sub-Platform</th>
<th>Example Username</th>
<th>Example Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your Firm</td>
<td>Bank ABC</td>
<td>Global</td>
<td>RE3</td>
<td>John.Smith12</td>
<td>Unique12</td>
</tr>
<tr>
<td>Bank ABC</td>
<td>Your Firm</td>
<td>Domestic</td>
<td>RE1/2</td>
<td>John.Smith34</td>
<td>Unique34</td>
</tr>
</tbody>
</table>

KEY POINT - To efficiently use the AccessEdge Portal your employees will need to track which BNY Mellon sub-platforms the segregated accounts are established under and log into the respective environments as required.
11.3 Reporting

Which AccessEdge Report shows my collateral allocations?
The Price report is the real-time AE report that can be downloaded from the Positions screen.
The Price report contains a breakdown of collateral allocations - aggregated at asset-level - and exposures per account.

FOR FURTHER DETAILS PLEASE REFER TO THE ACCESSEDGE PRICE REPORT GUIDE THAT SHOULD HAVE BEEN INCLUDED WITH THE RELATED DOCUMENTS

11.4 System Coverage

What are the AccessEdge system coverage times?
AccessEdge is open for system use Monday to Friday. The system is open at different times for the different sub-platforms, see below:

<table>
<thead>
<tr>
<th>Sub-Platform</th>
<th>EST</th>
<th>CET</th>
<th>JST</th>
</tr>
</thead>
<tbody>
<tr>
<td>RE1 &amp; RE2</td>
<td>8:00 to 19:00</td>
<td>14:00 to 01:00</td>
<td>22:00 to 12:00</td>
</tr>
<tr>
<td>RE3</td>
<td>19:30 to 18:30</td>
<td>01:30 to 00:30</td>
<td>08:30 to 07:30</td>
</tr>
<tr>
<td>RE4</td>
<td>18:00 to 08:00</td>
<td>22:00 to 12:00</td>
<td>05:00 to 19:00</td>
</tr>
</tbody>
</table>

✔ KEY POINT – The system coverage times specified above should not be confused with the RQV instruction cut-off timings which have been detailed separately in this guide. The RQV instruction cut-off timings are narrower than the system coverage timings.

Who can I reach out to with any system issues or questions?
You should contact the AccessEdge Helpdesk on CTDS_Connect_Help@bnymellon.com.

See below for the contact details of the Helpdesk regional teams.

- AMERICAS: +1 (855) 284 9065 (Toll Free) | +1 615-457-5589
- EUROPE, MIDDLE EAST, AFRICA: +44 (0) 20 7964 6161
- ASIA PACIFIC: +800 2265 6369 (Toll Free) | +65 6432 0314

FOR FURTHER DETAILS PLEASE REFER TO THE ACCESSEDGE PRICE REPORT GUIDE THAT SHOULD HAVE BEEN INCLUDED WITH THE RELATED DOCUMENTS
12.0

Allocation Extract Report

What is the Allocation Extract Report?
The Allocation Extract Report provides comprehensive data for Collateral Providers with respect to the holding and allocation of collateral.

What is the Allocation Extract Report?
The Allocation Extract Report is a comma separated value (csv) format file.

How do we receive the Allocation Extract Report?
BNY Mellon will deliver the Allocation Extract Report by SFTP. You will need to liaise with your BNY Mellon point of contact to arrange the SFTP configuration.

When will the Allocation Extract Report be sent?
The Allocation Extract Report is produced and distributed on an end-of-day basis. If you would like to receive on a different frequency, please discuss possible configuration with your BNY Mellon point of contact.

How do we interpret the Allocation Extract Report?
Please refer to the Allocation Extract V4 Specification Guide in the related documents that should have been included in the materials you received with this guide. If you do not have a copy, please reach out to your BNY Mellon point of contact.
BNY Mellon accept and send instructions through the electronic SWIFT message network for their Seg IM Triparty services.

Within this section we'll describe the different SWIFT message types used by BNY Mellon and its Clients for different scenarios. See the table below for a summary of the different message types.

<table>
<thead>
<tr>
<th>Triparty Seg IM Scenario</th>
<th>SWIFT Message Type</th>

</tbody>
</table>
13.1 Access (Cont’d)

SWIFT Keys
Before we go into the details of the different SWIFT message types, firms will need to test and confirm that they are set-up to send and receive SWIFT messages to and from BNY Mellon.

✔ KEY POINT – We recommend performing the SWIFT key exchange with BNY Mellon as soon as practically possible, so as not to delay your firm’s ability to send and receive SWIFT messages.

Has my firm previously sent SWIFT instructions to BNY Mellon?
If yes, then a SWIFT key exchange must already have been performed and will not need to be repeated.

If no previous SWIFT instructions, then your firm will need to perform a SWIFT key exchange to authorise the BIC relationship, via the Relationship Management Application (RMA). This must be performed in advance of the first collateral instruction being sent.

TO ARRANGE SWIFT KEY EXCHANGE REACH OUT TO YOUR BNY MELLON POINT OF CONTACT

SWIFT Keys
Before we go into the details of the different SWIFT message types, firms will need to test and confirm that they are set-up to send and receive SWIFT messages to and from BNY Mellon.

✔ KEY POINT – We recommend performing the SWIFT key exchange with BNY Mellon as soon as practically possible, so as not to delay your firm’s ability to send and receive SWIFT messages.

Has my firm previously sent SWIFT instructions to BNY Mellon?
If yes, then a SWIFT key exchange must already have been performed and will not need to be repeated.

If no previous SWIFT instructions, then your firm will need to perform a SWIFT key exchange to authorise the BIC relationship, via the Relationship Management Application (RMA). This must be performed in advance of the first collateral instruction being sent.

TO ARRANGE SWIFT KEY EXCHANGE REACH OUT TO YOUR BNY MELLON POINT OF CONTACT
The SWIFT MT527 is the first message in the Triparty Seg IM lifecycle with BNY Mellon. It is used to instruct the RQV that the bilateral parties have already agreed to collateralise.

### MT527 Message Template

To the right is the SWIFT MT527 message template, or schema, for instructing to BNY Mellon.

A description of the different SWIFT Tags, and how the message should be populated, can be found below the table.

### Row SWIFT Tag Field Description Format* Example
1. 16c Start of Block.
2. 4!c Number of messages.
3. 30x Sender's reference.
4. 3-6c Client's collateral instruction reference.
5. 3-6c Client's collateral transaction reference.
6. 4!c Function of the message.
7. 8!n Execution requested date.
8. 8!n Trade date.
9. 4!c Collateral instruction type indicator.
10. 8!n Exposure type indicator.
11. 8!n Collateral receiver/provider indicator.
12. 4!c Eligibility set profile number.
13. 16S:DEALTRAN Transaction amount (RQV).
14. 4!c Client static fields.
15. 4!c Transaction fields.
16. 4!c Hard-coded fields.

The MT527 specifications for the Global and Domestic service are identical with one exception. Domestic platform counterparties will require the 13B field to be included with a default value:

:13B::ELIG/371494AS4

However, the 13B field is subject to matching criteria, so should you report this field and your counterpart not, or vice versa, the instruction will fail.

✔ KEY POINT - It is important that all parties understand which BNY Mellon platform the segregated accounts are established through to ensure any MT527 messages are configured appropriately.

What are the different types of field within the MT527 message?

The fields within the MT527 SWIFT message fall under three key categories:

1. Hard-coded fields
   These fields contain values that will remain the same for all Triparty Seg IM SWIFT MT527 instructions, regardless of the facing counterparty or scenario.

2. Client static fields
   These fields are specific to the bilateral parties to the instruction and contain values that will be the same for all instructions sent for a particular relationship (i.e. for each IM CSA counterparty), regardless of the scenario.

3. Transaction fields
   These fields have values that will change for each individual MT527 instruction, as they hold information specific to each RQV.

How do we populate the different types of field in the MT527 message?

Below are the guidelines for how to populate the different field types for the MT527.

Hard-coded Fields

Please refer to the 'Example' column of the 'MT527 Message Template' table for the exact values to be used for any hard-coded fields.

These are the simplest fields to populate as they will never change.

For the TRAG (Triparty Agent) field, should we always use the same BNY Mellon value for both Domestic and Global services?

Yes. The same BIC code will always be used for both Global and Domestic services, which is IRVTUS3NBDS.
Client Static Fields

Upon the successful opening of segregated accounts, BNY Mellon will notify firms of a number of key IDs related to the account that will be required to construct the SWIFT message (see Account Set-Up).

- Purchaser ID (‘PID’) - Collateral Receiver’s ID
- Dealer ID (‘DID’) - Collateral Provider’s ID
- Account number –Account number for the new segregated account

These IDs become key fields used within the MT527 message template, combined with several other fields. More details in the table to the right.

✔ KEY POINT – Firms must record the static data (PID/DID/Account number) within their systems at an individual account-level in order that it can be populated in SWIFT messages when required.

If instructions have previously been entered via AccessEdge the value recorded in the Client Reference field must be recorded in the SCTR field of any subsequent SWIFT MT527 messages.

Firms will also need to record the date that they receive collateral for the first time as static data –this value must be available to populate in all future instructions.

### Client Static Fields

<table>
<thead>
<tr>
<th>Row</th>
<th>TAG</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>:20C::SCTR//</td>
<td>Transaction Reference</td>
<td>This field is used to assign a unique Client reference to the collateral position (this value is generated by the message sender, not BNY Mellon). All instructions for a given relationship must contain the same value. This is the Client Reference field in AccessEdge.</td>
</tr>
<tr>
<td>8</td>
<td>:98A::TRAD//</td>
<td>Trade Date</td>
<td>This field reports the day that the collateral position was created i.e. the day that the original INIT message was instructed (and matched). Therefore for an INIT message it will be the same as the Instruction date in the above field. For all subsequent messages it must be populated with the same value as the previous instructions.</td>
</tr>
<tr>
<td>14</td>
<td>:95P::PTYA//</td>
<td>Sender (BIC)</td>
<td>This field should be populated with the message sender’s 11 digit BIC code.</td>
</tr>
<tr>
<td>15</td>
<td>:97A::SAFE//</td>
<td>Dealer ID/ Purchaser ID</td>
<td>As Collateral Provider you will populate this field with your Dealer ID (When you are instructing against other BNY Mellon clients and your firm is the Collateral Receiver you will need to populate this field with your Purchaser ID)</td>
</tr>
<tr>
<td>18</td>
<td>:95R::PTYB//</td>
<td>Dealer ID/ Purchaser ID</td>
<td>As Collateral Provider you will populate this field with your counterparty’s Purchaser ID (When you are instructing against other BNY Mellon clients and your firm is the Collateral Receiver you will need to populate this field with your counterparty’s Dealer ID)</td>
</tr>
<tr>
<td>19</td>
<td>:97A::SAFE//</td>
<td>Account number</td>
<td>The segregated account number is reported in the PTRYB safekeeping field.</td>
</tr>
</tbody>
</table>
### Transaction Fields

The table to the right describes how to populate the transaction specific values in an MT527 instruction.

#### Collateral Instruction Type

(SWIFT Tag 22H::CINT/)

The Collateral Instruction Type field, or ‘CINT’ field, identifies the instruction scenario and is therefore the starting point for your MT527 instruction.

The CINT field is a ‘matching’ field, which means that both parties must instruct the same value for the instructions to be matched and processed successfully.

There are 3 possible values to report in this field:

- **INIT** – This value is used the first time that the exposure exceeds the exchange threshold and there is an agreed collateral exchange.
- **PADJ** – This value is used to report any adjustments to the RQV (increase/decrease) as a result of any agreed margin calls.
- **TERM** – Parties should only instruct this value when the relationship is being terminated.

✔ **KEY POINT** – The market practise to instruct a PADJ with a 0 notional instead of a TERM is a different to Repo instructions.

<table>
<thead>
<tr>
<th>Row</th>
<th>TAG</th>
<th>BNYM Value</th>
<th>Description</th>
<th>Set Field Value</th>
<th>Format Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>20C::SEME/</td>
<td>Sender Reference</td>
<td>A message-level reference. This reference must be unique for every message sent.</td>
<td>*</td>
<td>Free-text up to 16 characters</td>
</tr>
<tr>
<td>4</td>
<td>20C::CLIO/</td>
<td>Client Reference</td>
<td>Another message-level reference. This message must be unique for every message sent (note that this can be the same as the SEME reference).</td>
<td>*</td>
<td>Free-text up to 16 characters</td>
</tr>
<tr>
<td>6</td>
<td>230:</td>
<td>Function of the message</td>
<td>This field identifies whether this instruction is a new message or a request to cancel a previously sent message. Should be reported with value NEWM for all instructions or CANC in the event of a cancellation.</td>
<td>NEWM</td>
<td>GANC</td>
</tr>
<tr>
<td>7</td>
<td>98A::EXRQ/</td>
<td>Execution Requested Date</td>
<td>This is the settlement date of the collateral instruction.</td>
<td>YYYYMMDD</td>
<td></td>
</tr>
</tbody>
</table>
| 8   | 22H::CINT/ | Instruction Type | This field is used to report the purpose of the message, using one of the following options:
- INIT
- PADJ
- TERM
To determine the applicable value please refer to the section above. | INIT PADJ TERM | |
| 11  | 22H::REPR/ | Collateral Provider/Receiver | This value indicates the role of the message sender in the transaction. As Collateral Provider, you will populate this field as PROV. | PROV RECE | |
| 32  | 19A::TRAAl | Transaction Amount (RQV) | This field is used to instruct the RQV. The notional RQV is preceded by the currency of the agreement. | USD20000,00 | 3 digit ISO currency code + Notional using comma decimal eg. USD20000,00 |
How do we cancel an MT527 instruction?

In order to cancel an MT527 instruction, the instruction should be re-sent with the same values as the original instruction with two key changes:

1. The function of the message should be updated to :23G:CANC

2. The message reference fields, SEME and CLCI, should be unique to each message and so must be different to the original instruction.

Additionally, the following rules must be applied to any cancellation instructions:

• Both parties must send matching cancellation instructions for the original instructions to be cancelled

• The date of the instruction to be cancelled must not be in the past

And what is the outcome when the cancellation instructions for both parties are matched?

When cancelling a ‘PADJ’ instruction the RQV for the collateral account will revert to the previously agreed RQV.

KEY POINT – BNY Mellon cannot accept a new instruction if a previous instruction remains unmatched (as there is no option to modify an unmatched instruction). Therefore you will need to cancel the original instruction before submitting the revised MT527 instruction.
What happens after platform cut-off?

The BNY Mellon system date is reset during the shutdown window. This means that any instructions that fail to match before the cut-off will be rejected because the Execution Requested Date will be in the past once the system restarts (remember that Seg IM instructions typically need to be booked for same business day settlement).

What are BNY Mellon’s coverage times for MT527 receipt and matching?

SWIFT messages can be instructed and matched between the hours specified in the table to the right.

As stated earlier on, firms will need to understand which sub-platforms their segregated accounts are established under to dictate the relevant settlement timings.

What should we do if we, or our counterparty, instructs after platform cut-off?

Parties will need to re-instruct and match the RQV once the system restarts with a revised Execution Requested Date.
## Message Instruction Status

BNY Mellon can communicate the status of all collateral instructions to its Collateral Providers and Collateral Receivers via the SWIFT MT558 message template.

### MT558 Construction

The MT558 messages are responses to individual MT527 RQV instructions and the construction of the MT558 status message follows a similar format.

There are two key objectives when consuming a SWIFT MT558 message:

1. **Identifying the Collateral instruction** that the MT558 relates to
2. **Interpreting the status** itself

✔ **KEY POINT** - Each MT558 message relates directly to an individual Collateral instruction

---

13.3

Identifying the Originating MT527 Instruction

BNY Mellon will report the client's Collateral Instruction Reference in the MT558 under the 20C::CLCI tag.

The MT527 message contains two instruction references, held within the CLCI and SEME fields (although firms may report the same value under both fields).

The instruction reference that BNY Mellon reports in the MT558 20C::CLCI tag can be configured to be either of these references, based on the subscriber's preference.

In addition the MT558 message contains the Collateral Transaction assigned in the MT527 instruction. This reference is reported in the 20C::SCTR tag of the MT527 and replayed in the MT558 20C::CLTR tag.

Interpreting the Status

Instruction Status Fields

The MT558 reports the status of the instruction in the Reason sub-sequence, highlighted green and identified by the block reference 'STAT'.

SWIFT tag 25D is present in all MT558 messages and describes the status of the instruction using a four-digit code.

The table below details the codes for each status. It also describes the expected field combinations in MT558 messages for each status.

<table>
<thead>
<tr>

</table>
Collateral Allocations

Allocation Status Fields

For allocation status messages the Required Margin Amount (equivalent of the RQV) and actual Collateralised value allocated to the trade (post-haircut value of allocated assets) will be reported as two additional fields:

- Required Margin Amount – reported under the SWIFT tag :19A::RMAG/
- Collateralised Amount – reported under the SWIFT tag :19A::ALAM/

MT527 Replayed fields

All remaining fields are inherited from the original MT527 instruction and replayed back within the MT558 message.

MT558 - Allegement Status

If your firm subscribes to Allegement messages, BNY Mellon will issue an MT558 message in the event that your counterparty has instructed BNY Mellon but there is no corresponding instruction issued from your firm.

The MT558 Allegement messages are constructed in the same format as the MT527. The distinction being that the function of the message will be reported as :23G:ADVD.

SWIFT MT558 Examples and Technical Specifications

Please refer to Appendix 2 for example SWIFT messages across the range of scenarios.

Additionally the full format specification for MT558 SWIFT Triparty messages will have been included in the accompanying documents (SWIFT MT527-558 Format Specification). If you do not have these documents, please reach out to your BNY Mellon point of contact for a copy.
BNY Mellon publishes allocation data through the SWIFT network via the MT569 message.

**MT569 Triparty Collateral and Exposure Statement**

The MT569 report provides details of collateral valuation and agreed exposure, including the following:

- Exposure (Agreed RQV)
- ISIN / CUSIP of pledged collateral
- Notional
- Market Value
- Adjusted Value

✔ **KEY POINT** – The MT569 report details the assets that have been allocated to cover agreed RQVs into segregated accounts. It will not include details of assets that remain in the longbox.

BNY Mellon offer two versions of the report – a Summary MT569 and a Detailed MT569. Each message is constructed from the following sections:

<table>
<thead>
<tr>
<th>Block</th>
<th>Description</th>
<th>Summary</th>
<th>Detailed</th>
<th>Behaviour</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sequence A</td>
<td>General Information</td>

<td>Repeatable per asset</td>
</tr>
</tbody>
</table>
How do I read an MT569 message to understand allocated assets?

In the section that follows we will concentrate on the fields relevant to identifying assets allocated against Segregated IM accounts.

For a full specification of all fields within the MT569 SWIFT format, please refer to the SWIFT MT569 Format Specification that will have been included in the accompanying documents. If you do not have a copy, please reach out to your BNY Mellon point of contact for a copy.

Summary Sequences

The first four sequences of the MT569 message are general information and summary data. For the purpose of consuming collateral allocations, the only relevant fields in these sections are contained within the Collateral Parties Block which identifies the party that this report is applicable to.

Detailed Subsequences

The four subsequences are recurring data blocks that are designed to repeat as applicable depending on the number of counterparts faced, products traded, and collateral breakdown according to the hierarchy in the table on the previous page.
BNY Mellon issue an MT569 that includes all Segregated IM relationships in the same message for Collateral Providers. Therefore subsequences C1 to C1a1A will repeat in the SWIFT message for each relationship.

✔ KEY POINT – Securities are reported under the CUSIP in the Domestic platform.
Which fields do I need to consume from each block?

All firms will need to identify and consume certain fields, such as who the report relates to, ie the Collateral Provider (Pty A) and Collateral Receiver(s) (Pty B).

The remaining fields will vary based upon the objective for firms processing the allocation data, and whether they want to consume simple ISIN/CUSIP and notional or the underlying market and adjusted valuations.

The MT569 SWIFT standard serves multiple purposes and product classes. The table on the next page concentrates on the fields relevant to identifying assets allocated against Segregated IM accounts and their collateral value.

For a full specification of all fields within the MT569 SWIFT format, please refer to the SWIFT MT569 Format Specification that will have been included in the accompanying documents.
<table>

</tr>
</tbody>
</table>

- **C1a1 - Valuation Details**: Uses Tag 92B:EXCH to specify the exchange rate used between the asset denomination currency and the agreement currency.
- **C1a1 - Valuation Details**: Uses Tag 92A:VFAC to specify the valuation factor applied to the market value of the collateral to calculate the post-haircut value of the asset.
- **C1a1 - Valuation Details**: Uses Tag 3CB:SEIV to specify the security identifier and the security will be reported as an ISIN if the transaction is in the Global platform and a CUSIP in the Domestic platform.
- **C1a1 - Valuation Details**: Uses Tag 55B:SECN to specify the collateral security or type codes such as FAMT: Debt Instruments, UNIT: Equities.
- **C1a1 - Valuation Details**: Uses Tag 11A:AVCN to specify the currency of denomination of the assets.
When are the SWIFT reports sent?

BNY Mellon send EOD SWIFT reporting as standard upon shutdown of each environment as specified in the table. Please refer to Global vs. Domestic BNY Mellon Platforms section for an explanation on the respective BNY Mellon environments.

Intraday MT569 Distribution

In addition to the EOD messages, firms may also subscribe to receive MT569 messages throughout the business day. Recipients must specify:

- The frequency of their intra-day MT569 messages (e.g. every 30mins/hour/2 hours).
- The operating hours within which they wish to receive MT569s (e.g. hourly between 8am and 5pm CET).

By now you should understand the steps that need to be completed in order to be operationally ready to pledge IM collateral through BNY Mellon.

- Complete KYC
- Execute contracts with BNY Mellon
- Establish your Dealer Longbox
- Execute Account Control Agreements (ACAs) with your counterparts and BNY Mellon
- Execute Eligible Collateral Schedule
- Record all static data associated with the accounts
- Submit Electronic Access form (for Global accounts)
- Submit Operational Preferences
- Establish user login details for AccessEdge
- Configure SFTP details if applicable
- Perform SWIFT RMA key exchange (if required)
### APPENDIX 1

**SWIFT MT527 Examples**

To the right are example SWIFT MT527 instructions that correspond to the RQV example scenario from earlier in the guide.

To the right is an example of the MT558 status messages that would be sent at the different possible stages.
Margin Tonic is a specialist consultancy focused on accelerating change within Collateral and related domains.

We have defined and delivered the changes driven by the IM regulations to multiple firms across different phases, including Tier 1 banks, smaller banks and the buy-side.

Within our previous IM deliveries we have led the onboarding of multiple firms to Bank of New York Mellon’s Seg IM Triparty service. So we’re well-placed to give the Client viewpoint on the onboarding process and operational set-up that new in-scope firms will need to follow.

For more details on Margin Tonic, feel free to take a look at our website at www.margintonic.com, including our range of IM resources and related services.
